

The Atlas Product Family in Brief

Secure File Transfer/ Managed File Transfer

Atlas Secure Data Exchange (SDX) for confidential information

Secure Data eXchange, is probably the fastest, most reliable, auditable and the most secure way to transfer electronically any file type from one location to another. Check point restart comes as standard and files can be sent manually, scheduled or even trigger based using the client API. SDX is a flat cost, secure, ultra reliable data exchange service at a fraction of the cost of managing FTP and security systems. Used worldwide by small and large companies alike such as Intel and Versace.

SDX is designed for banking, financial services, government, military, health, legal and associated services for who total security in the transmission of data is fundamental to their reputation and/or commercial success. SDX can be provided as a service or supplied as a dedicated server cluster for larger organisations that require their own secure and private section of the Internet.

Can be purchased as a managed service or customer based system

No-One left Behind !

EDI systems for every trype of organisation

Software

Atlas MX

Message eXchange is a simplified, jargon free EDI software tool to enter data manually or turn an order into an invoice/credit/acknowledgement/delivery note. Designed for use like an email system with Outbox, Inbox, Archive etc

MX is intended for low volume users with no technical expertise or need for integration. Also extremely useful as an instantly available interim measure for larger companies while they perform full integration.

Atlas MX Plus

Message eXchange Plus is similar to MX but with the addition of a CSV file import export ability allowing for integration with other systems.

MX Plus is intended for companies who need to be up and running quickly but who also wish to exchange the data automatically with another system using a simple CSV file format. MX+ has a huge range of configuration capabilities and can be expanded and priced to suit any requirements.

Atlas MX Enterprise

Message eXchange Enterprise is similar to MX Plus but with the addition of unlimited transformation and communication capabilities.

Intended for companies who need to achieve complex data conversions and provide a data clearing house yet still require data to be presented in human readable paper format

e50 for Sage Line 50 Users

A fully integrated, one button solution for Sage Line 50 users.
EDI knowledge not required. Users only see Sage Line 50

e100 for Sage Line 100

A fully integrated solution for Sage Line 100 users
EDI knowledge not required. Users only see Sage Line 100

eMMS for Sage MMS Users

A fully integrated solution for Sage MMS users
EDI knowledge not required. Users only see Sage MMS

Sage Line 200, 500 Windows and Unix users

We have an integrated version of Atlas EDI for these customers.
Generally aimed at larger companies with bigger accounts systems and volumes

Atlas Corporate

Totally scalable, open, super fast, data translation and communications system used by small and large companies alike. Users can add/amend their own trading partners, documents, networks and passwords.

Available as single user and company through to multi-user, multi-company, Atlas Corporate is an award winning system powerhouse package for integration into virtually any other system

The ultimate in EDI and XML translation systems aimed at the larger organisations that require all functionality but need enhanced EDI/XML capability for handling larger volumes and more complex integration.

Atlas Corporate is for companies who want to have total control of their system with full accessibility and configuration ability. It also appeals to companies with the need for speed of translation and the need to integrate with varying in-house and back office systems

Services

Atlas Matrix Managed Service

This is a fully scalable managed service for data clearing and transformation that runs on the back of BDX but also has access to other communication methods and VANs.

Subscribers send and receive data in a format to suit their in-house systems and use any communication method that they like with the most cost-effective method being BDX. All the EDI translation and communications are carried out by Atlas Products as the data passes through its Matrix system. For example, data can be EDI, CSV, HTML etc and converted to any other format or standard.

Matrix copes with all suppliers existing technical infrastructure, accounting system, size and location. Matrix will accept any document format a sender cares to provide and convert that into the format required by the recipient's accounting or ERP system. It is a complete service offering with no hardware or translation software to install for either buyers or suppliers. Depending on the complexity, buyers and suppliers can be transacting on Matrix within 48 hours of joining.

Intended for companies large or small, with little or no EDI or XML expertise or those who wish to outsource their EDI systems completely

Communications

Atlas Business data Exchange (BDX) Network for EDI

BDX is a flat cost, secure, ultra reliable data exchange service exceeding Van capability at a fraction of the cost. Used worldwide by small and large companies alike such as Unimer UK, Dunnes Stores, Bestway Cash & Carry, SPAR, Mace and over a thousand others

For companies wishing to significantly reduce EDI VAN charges, trying to manage FTP servers or considering using AS2 or the Internet as a transport mechanism.

AS2 Servers

AS2 server system – this is not the client side.

For larger companies who want their own AS2 capability. AS2 is designed to transport data securely point to point over the internet.

AS2 Clients

AS2 Client side communications

Where AS2 is essential for companies to trade with Asda, Compass and others. AS2 is designed to transport data securely point to point over the internet.

Ecommerce

Fusion Web system

Fusion is a modular web enablement system for larger companies to gain 100% EDI penetration and 100% accurate EDI by allowing suppliers to download orders and turn into Invoices, Credits, Acks, ASNs etc. There are further options to input Orders, Price matching, invoice matching GRN & POD matching, Statements plus document scanning and OCR.

For larger Retailers or large buyers of goods who wish to take advantage of the huge cost savings such a system can deliver. We have saved companies in excess of £1m per annum using just some of the modules.
